Applesoft: Commas and printing

===

The following information applies to the Apple II Plus with a 40-column screen.

The third comma tab field is only available if there is nothing beyond column 23. The first character in the third comma field can print outside the text window.

HTAB can force the cursor outside the text window which can kill a program on the next PRINT statement.

VTAB ignores the text window. VTABbing below the text window will cause all output to be on one line. VTABbing above the text window will scroll into the window but the area above the window won't scroll.
