Manzanita Software Systems: Version 5.10 of BusinessWorks

===

Manzanita Software Systems released version 5.10 of BusinessWorks on January 22 with two new features:

   1) The ability to load onto a RAM card with a minimum of 512K (1mb recommended). BusinessWorks programs are loaded into the RAM card memory, while company data is maintained on the 3 1/2" disk, so there's no chance of loss of data in case of power failure. A variety of RAM cards can be used, including Apple's Memory Expansion Card.

   2) The ability to work with Pinpoint from Pinpoint Publishing, Inc. BusinessWorks users can access the Pinpoint desk accessories such as the calculator, calendar, clock, etc., while using BusinessWorks.

BusinessWorks users can get the new version directly from Manzanita Software.
