LOGO: No Boot on IIc or Enhanced IIe

```
======================================================================
```

There are some disks of Apple LOGO with DOS that don't boot on the Apple IIc or Enhanced IIe. The problem stems from the scheme used to protect the disks from illegal copying.

You can recognize these disks by the sign between the words Apple and Logo. The sign is the registered trademark sign, the R in a circle: Apple (R) Logo. Disks so labeled will not work. Send them to Media Exchange for replacement.
