GS/OS: How To Install Drivers And Other Devices

===

This article last reviewed: 1 November 1988

The SYSTEM.DISK (included with Apple IIGS System Disk 4.0 -- GS/OS), does not contain the drivers for a 5.25-inch or SCSI drive. Without these drivers installed, the system cannot access the 5.25-inch or SCSI drive.

To install these (and other) drivers:

1. Create a start-up disk and make a back-up copy.

IMPORTANT: Do not run the Installer program on your original start-up disk.
           Also, do not install GS/OS on a third-party application disk.
           The application may work only with the original System files.

2. Run the Installer program (on the SYSTEM.TOOLS disk) so that it installs
    drivers on the back-up copy of the start-up disk.

3. Select "Apple Disk 5.25" for the 5.25-inch drive.

4. Select "SCSI Hard Disk" for the SCSI drive.

Contact the developer before upgrading to GS/OS, if you have any compatibility questions.

The following can be added with the Installer program:

Additional Fonts
Advanced Disk Utility
Apple Disk 5.25
Apple MIDI
AppleTalk ImageWriter
AppleTalk ImageWriter LQ
Card 6850 MIDI
CD-ROM
Direct Connect ImageWriter

Direct Connect ImageWriter II
Epson Printer
System Files
LaserWriter
Network Printer Chooser
Network Printer Namer
SCSI Hard Disk
UniDisk 3.5
