DOS 3.3: Auto-run with a machine language program

==

When DOS is booted, it runs the program that was in memory when the diskette
was initialized, unless you change DOS to BRUNs the Hello file instead.
In a 48K Apple change the byte at $9E42 from $06 to $34. The following
sequence of commands creates a disk that BRUNs Hello when it is next booted.
After putting a blank diskette into the drive:

   a. Call -151
   b. 9E42:34
   c. 3D0G
   d. init Hello
   e. delete Hello
   f. BLOAD the binary program from another diskette
   g. BSAVE Hello on the new diskette
