Apple IIGS: Supported AppleShare Versions (7/94)

===

Article Created: 13 July 1994

TOPIC ---

I just upgraded my AppleShare server to AppleShare 3.x and now the Apple IIGS
computers will not login in. Sometimes they get a prodos error message other
times they just hang at startup with some weird numbers.

DISCUSSION --

The supported configurations for AppleShare and the Apple IIGS are:

1) GSOS 5.0.4 and AppleShare 2.x
2) GSOS 6.x and AppleShare 3.x and 4.x

Note: AppleShare 4.x does not support network startup
