Logo II: Clearing an Apple IIc screen under Catalyst 3.0

===

After loading LOGO II on an Apple IIc with Quark's Catalyst 3.0, the LOGO II
screen is not cleared. You see High-Res graphic 'garbage' on the screen.

To solve the problem, simply execute the following command at the '?' prompt.

? .DEPOSIT 49247 0

This will clear the graphics left over from the Catalyst High-Res
screen images.
