Programmer's Aid #1: Applesoft and the Programmer's Aid

==

The Programmer's Aid #1 diskette uses some of the same addresses as the
Applesoft ROMS, making it impossible to use the diskette from Applesoft. The
only way to have access to the memory test is to enter Integer BASIC before
going into the monitor. The sequence of commands is:

        Int
        Call -155
