## Moving DOS 3.3 Data to the Macintosh

To run Apple II DOS 3.3 files on a Macintosh (requires at least a Macintosh 512K Enhanced), follow the instructions below.

### For an Apple II Plus

#### *Required Equipment:*

##### **Apple II Plus**

- 64K of RAM
- One 5.25-inch drive
- One 3.5-inch drive
- The "Convert" program from ProDOS System Disk Version 1.0, on a bootable 3.5-inch disk
- Your data on a 5.25-inch disk

##### **Macintosh**

- A Macintosh computer (Macintosh 512K Enhanced, Macintosh Plus, Macintosh SE or Macintosh II families)
- Two disk drives (two 800K floppy disk drives or one 800K floppy disk drive and a hard disk)
- Apple File Exchange (AFE) software (on one of the floppy disks or on the hard disk)

#### **Steps to Follow:**

1. Insert the ProDOS disk in the 3.5-inch drive and the data disk in the 5.25-inch drive
2. Run "Convert"
3. Transfer the data ("Convert" defaults to 5.25-inch → 3.5-inch)
4. Eject the 3.5-inch disk, which now has the data in ProDOS format
5. Launch Apple File Exchange on the Macintosh
6. Insert the ProDOS 3.5-inch disk in the Macintosh drive (AFE displays its disk in one window and the ProDOS disk in another)
7. Select the data file from the ProDOS disk, and click the **Transfer** button

## For an Apple IIe

### Required Equipment:

#### Apple IIe

- 128K of RAM
- One 5.25-inch drive
- One 3.5-inch drive
- System Utilities Version 3.0 on a bootable 3.5-inch disk
- The data on a 5.25-inch disk

#### Macintosh

- A Macintosh computer (Macintosh 512K Enhanced, Macintosh Plus, Macintosh SE, or Macintosh II families)
- Two disk drives (two 800K floppy disk drives, or one 800K floppy disk drive and a hard disk)
- Apple File Exchange software (on one of the floppy disks or on the hard disk)

### Steps to Follow:

1. Insert the ProDOS disk in the 3.5-inch drive and the data disk in the 5.25-inch drive
2. Run System Utilities (labeled SYSUTIL.SYSTEM)
3. Copy the data from the 5.25-inch disk to the 3.5-inch disk using "Copy Files"
4. Eject the 3.5-inch disk, which now has the data in ProDOS format
5. Launch Apple File Exchange on the Macintosh
6. Insert the ProDOS 3.5-inch disk in the Macintosh drive. (AFE displays its disk in one window and the ProDOS disk in another)
7. Select the data file from the ProDOS disk, and click the **Transfer** button

When you follow these instructions, the data becomes a Macintosh text file. Once in the Macintosh text file format, it can be loaded into a variety of Macintosh applications.
